

ERCO Greenology for sustainable lighting

Light is our contribution to making society and architecture better and, at the same time, preserving our environment. We understand light as the fourth dimension of architecture – and thus as an integral part of sustainable building.

The term ERCO Greenology combines ecological responsibility with technological expertise and is our strategy for sustainable lighting. The sustainable production of efficient and effective luminaires as well as perception-oriented lighting design according to the Human Centric Lighting principle are the pillars of this strategy. With "Lighting Durability: 20 Years of service life", we have formulated the development goal of designing particularly durable, economical and sustainable lighting solutions.

ERCO is a family business in its third generation. Thinking in the long term and sustainable behaviour are firmly anchored within our corporate culture and are part of our understanding of environmental, social and corporate governance. A compliance management system guides our actions.

With ERCO Greenology, we are committed to aligning our luminaire development and production processes to our sustainability goals and to making architecture better through sustainable lighting.

Our sustainability goals are:

Offering the most effective lighting tools and methods of lighting in the market

Lighting Durability: 20 years of service life

A CO₂ neutral light factory

Expansion of the circular economy
